Due to the substantial size of this project, it is not feasible to upload it to GitHub. To ensure accessibility and ease of use, we have provided a direct link to the complete project folder can simply access the shared Google Drive link to obtain the full project and start working immediately. This method also facilitates version control and collaboration by allowing updates and additional resources to be shared efficiently.

We recommend downloading the project in its entirety to ensure all dependencies and resources are available. For any questions or assistance regarding accessing the project folder, please do not hesitate to contact us.

hosted on Google Drive. This approach allows reviewers, collaborators, and stakeholders to download the entire project without encountering file size limitations or incomplete uploads.

The project folder contains all relevant materials, including source code, datasets, configuration files, and documentation necessary to understand, run, and evaluate the project. By providing the folder in a centralized location, we ensure that all components are preserved in their original structure and format, preventing potential issues that might arise from missing or corrupted files.
